

# RAYMEDI 4 Desktop

## Secure your Desktop

RayMedi Desktop is an unique security tool through which the entire Desktop Access is managed using RayMedi Security Manager. This tool blocks access to the user desktop applications such as IE, Control Panel, Taskbar etc., and provides access to RayMedi applications only. The tool is available both as standalone version and as add-ons to RayMedi Retail and Distribution products. Basically the program locks the computer and gives access only to the application you specify and applications allowed by administrator.

### Key Features:

- Provides security, privacy and access control
- Restricts users to run specific applications only
- Only administrators can add applications that can be given access
- Only administrators are allowed to provide/change passwords
- Users open and work only with the applications that are provided access

### Key Business benefits:

- Increased security ensures reduction in Virus, Spam and Malware threats.
- Increased productivity as the users can be denied access to unproductive applications like games, music, video and movies.
- Prevents misuse (knowingly or unknowingly) of software as some users might delete some key files of application.
- Prevents tampering with configurations of important devices such as printer and network, as this can result in total stoppage of operations.
- Ensures complete control over of all the desktops in a multi-machine environment.
- 100% secure
